The Honorable Cheryl Youakim
Chair, Education Policy Committee
Minnesota House of Representatives
591 Rev. Dr. Martin Luther King Jr. Blvd.
St. Paul, Minnesota 55155

RE: Support HF 1343

Dear Chairwoman Youakim and Members of the House Education Policy Committee:

On behalf of the SUNucate Coalition, which represents multiple medical specialty associations, patient advocacy and other groups, we write in strong support of HF 1343 and applaud the efforts to remove barriers preventing children in Minnesota from using over-the-counter sunscreen at school. Statewide policies should allow and encourage students to apply, carry and store sunscreen for personal use.

Broad “medication bans” that are in place in schools across the country require students to have a note or prescription from a physician in order to have these medications. Sunscreens are regulated as over-the-counter drugs under the Federal Food, Drug and Cosmetic Act, making them subject to these bans. Although these policies are meant to protect children, they also hinder them from accessing sunscreen during outdoor school activities and puts them at risk of damaging sun exposure. According to a 2016 study from the Centers for Disease Control and Prevention (CDC), half of school districts across the country neither require nor recommend policy which allows students to apply sunscreen while at school.ⁱ The CDC believes that these types of school policies create barriers to the use of important sun protection.ⁱⁱ

Additionally, it has been found the use of sunscreen at a young age is a critical and necessary component of skin cancer prevention. The CDC reports that only 11 percent of students reported regular or nearly regular use of sunscreen during prolonged periods of regular sun exposure.ⁱⁱⁱ Furthermore, the American Medical Association has adopted policy to support the exemption of sunscreen from any over-the-counter medication bans in school settings and encourages schools to allow students to possess sunscreen without restriction.

It is in the public interest that schools set policies that allow students to possess and apply sunscreen during school. Due to the aforementioned reasons, we ask that HF 1343 be passed by the House Education Policy Committee on for full consideration by the Minnesota House. Should you have any

questions, please contact Emily Ninnemann, ASDSA Manager of Advocacy and Practice Affairs, at 847-956-9121 or at eninnemann@asds.net.

Sincerely,
