Status of HIV/AIDS in Minnesota, 2018

INCIDENCE, PREVALENCE, AND DEATHS, 1996-2018

HIV Diagnoses

The number of new HIV diagnoses has remained relatively stable, around 300 cases per year.

People living with HIV

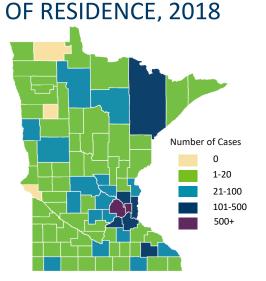

The number of people living with HIV is growing because people with HIV are living longer and healthier lives.

All deaths of people with HIV

Advances in treatment were introduced in 1996, which led to the large drop in deaths between 1996 and 1997.

PREVALENCE BY COUNTY

RACIAL DISPARITIES IN HIV PREVALENCE, 2018

Race/ Ethnicity White, non-Hispanic	Cases 4,117	% 46%	Rate per 100,000	Rates Compared to White	
				-	Ť
Black, non African-born	1,876	21%	1,106.2	12 x higher	ŶŶŶŶŶŶŶŶŶŶŶŶ
Black, African-born	1,468	16%	1,400.4	15 x higher	tititititi
Hispanic*	894	10%	357.2	4 x higher	††††
American Indian	115	1%	188.8	2 x higher	ŤŤ
Asian/ Pacific Islander	188	2%	86.9	similar	Ť

*Persons of Hispanic ethnicity can be any race

There are large racial and ethnic disparities among PLWH.

The rate of HIV is highest among black African-born Minnesotans. The black African-born population experiences HIV at more than 15 times the rate of the white, non-Hispanic population.

= 91.0 per 100,000

Notes: Incidence = Number of new cases of HIV

Prevalence = Number of people living with HIV/AIDS **HIV** = Human Immunodeficiency Virus

AIDS = Acquired Immunodeficiency Syndrome

PLWH = People living with HIV

Linked to care = Linked to HIV medical care within 30 days of diagnosis

Retained in care = Had one or more HIV lab results (CD4 or viral load) during 2018

Virally suppressed = A very low or undetectable level of HIV in the body

MSM = Men who have sex with men

IDU = Injection drug use

CONTINUUM OF CARE, 2018

People living with undiagnosed & diagnosed HIV

90% aware of their status

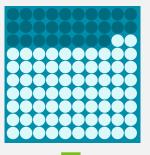

960 undiagnosed

MINNESOTA HIV

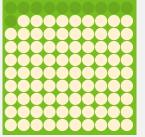

8,702 diagnosed

Of those living with diagnosed HIV at the end of 2018 (n=8,702):

72% were retained in care

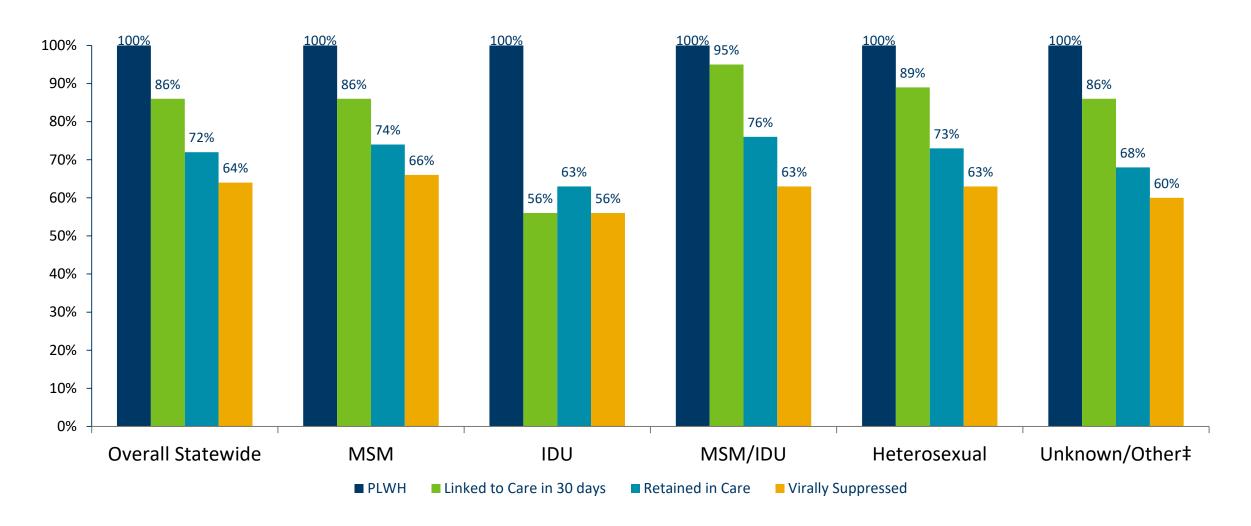

89% of those retained in care were virally suppressed

64% of those living with diagnosed HIV were virally suppressed

Data Source: Minnesota Department of Health. (2019). HIV/AIDS Surveillance System, 2019. Retrieved from http://www.health.state.mn.us/diseases/hiv/stats/2018/index.html

Percentage of people diagnosed* with HIV engaged in stages of the care continuum, by mode of transmission† in Minnesota, 2018

^{*} Defined as people diagnosed aged 13 or more with HIV infection (regardless of stage at diagnosis) through year end 2017 who were alive at year-end 2018

Notes:

Incidence = Number of new cases of HIV
Prevalence = Number of people living with HIV/AIDS
HIV = Human Immunodeficiency Virus
AIDS = Acquired Immunodeficiency Syndrome
PLWH = People living with HIV

Linked to care = Linked to HIV medical care within 30 days of diagnosis

Retained in care = Had one or more HIV lab results (CD4 or viral load) during 2018

Virally suppressed = A very low or undetectable level of HIV in the body

MSM = Men who have sex with men

IDU = Injection drug use
