

DISPROPORTIONATE SHARE HOSPITAL PAYMENTS

January 2011

DSH Background

The disproportionate share hospital (DSH) increase is an add-on to payments for inpatient hospital services under the Medical Assistance (MA) fee for service program. Payments are established under guidelines and limits of the federal government and set under Minnesota law. DSH payments are 50% federal and 50% state.

DSH payment factors for individual hospitals are calculated as the difference between a hospital's MA patient days and the mean MA patient days of all Minnesota hospitals in a base year. For example, a hospital with 15% MA business would have a 5% DSH if the mean was 10%. The DSH factor is also increased by ten percent for hospitals with MA patient days above the mean plus one standard deviation. The add-on payment to the hospital is determined by multiplying the DSH factor by the hospital's regular payment for inpatient services. Essentially, a hospital's DSH payment increases as their percentage of MA business increases. The DSH factors vary from less than 1% to more than 59% at a Children's hospital.

Federal DSH Limits

The federal government has established limits on DSH payments to hospitals. The first is a statewide aggregate limit on the federal share of payments. From 2003 to 2008, this has grown at 16% per year to approximately \$68 million in 2008. After 2008, it grows with the consumer price index. However, the FFY09 and FFY10 limits were increased 2.5% each year under the American Recovery and Reinvestment Act of 2009. This increases the federal share of the limits by \$1.9 million in each year.

The second limit is the hospital specific DSH limit. This limits individual hospitals DSH payment to financial losses under the MA program, the costs of the uninsured and the GAMC program. This limit has been the subject of federal audits in many states including Minnesota. The federal government requires an independent, certified audit of each hospital's DSH payments and limit.

The DSH payment is no different than any other payment under MA for inpatient services except that it is limited separately from other payments. All MA payments, including DSH, require a state share of payments before the federal government will match the payment. In recent years, federal scrutiny has tightened because states attempted to use the entire aggregate limit with state share financing mechanisms that include intergovernmental transfers and certified public expenditures.

DSH Payments

Under current Minnesota law, there are three types of DSH payments. The first is the hospital specific fee for service payment described above. For FFY2009, this results in \$25.5 million in federal payments. The second is a federal matching payment on inpatient and outpatient GAMC fee-for-service payments. For FFY2009, this results in \$31.5 million in federal payments. The third type of DSH payment uses certified public expenditures (CPE) that will result in federal payments on the CPE of two hospitals. The GAMC and CPE payments are expected to use up the aggregate DSH limit.

(1) MA utilization rate equals MA patient days divided by total patient days from the hospital's base year cost report.
(2) MA DPA equals hospital's MA utilization rate minus average utilization rate (10.85%). If the hospital's utilization rate is above the average plus 1 standard deviation (21%), the DPA is increased 10%.
