

# WATER TOWER FUNDING

## PUBLIC PURPOSE

To construct a second water tower to provide residents, businesses, and visitors with adequate water services, and maintain adequate fire protection.

## WHAT IS THE CITY DOING?

The City has taken emergency action to conserve water to ensure it meets potential public safety demands. The City has implemented an odd/even watering restriction, tiered water pricing so large water consumers pay a premium for excess water usage, and established a rebate program for smart irrigation controllers to further conserve water usage in the City. Even with the restriction and pricing structure in place, the City still has fears that the fire department might not have the water they need during peak usage times.

The City has had public open houses and other resident engagements to select the best site for the new tower.

## SCHEDULE

Construction Fall of 2023 thru spring 2025.
