

To whom it concerns,

Fifty years ago my brother and I were checking our own corn fields. We saw weeds and deer tracks. We crossed the fence line about 30 feet away where the neighbor sprayed his corn field. We saw no weeds and no deer tracks. A few years ago the D.N.R. stated not to eat the liver from deer because farmers spray their fields with chemicals.

About ten years ago a former high school honor student, friend + farmer who sprays. He lives 3 miles away from me and brought it to my attention that his apple trees by his house had only bumble bees, no honey bees. Stated when he was a kid there were lots of honey bees.

I would like the bills SE ¹⁷¹⁸~~5273~~ + HF 2472 going through the House + Senate to pass. Not only to protect the bee and birds also for the health of the people and planet.

Sincerely,

a concerned farmer,

Roy J. Perish
