

ARE YOU PROTECTING THEM?

This is what happens when a lead bullet hits deer tissue:

In 2008, DNR concluded: “A key take away message from the study is that given fragments were found so far from the exit wound, routine trimming likely will not remove all of the fragments and DNR cannot make a recommendation as to how far out trimming should occur.” <https://www.dnr.state.mn.us/hunting/ammo/lead-short-summary.html>

HEALTHY NATURAL MEAT? NO LEAD AMMO!
