

Dear Rep. Hansen,

I hope this note finds you and your loved ones well. We are writing in regards to Tuesday's remote hearing on HF4498 - Environment and natural resources trust fund funding provided, previous appropriations modified, and money appropriated. One of the projects, **TeachScience: Schools as STEM living laboratories**, will connect our state's new science standards, renewable energy, and STEM opportunities through teacher training and support across the state to prepare students for the challenges and careers of the future.

With over 14 years of experience leading teacher training, developing curriculum, and strong relationships with the renewable energy sector and green STEM fields, Climate Generation is well prepared to lead this project. In addition, we have successfully implemented two ENRTF funded projects between 2010-2015.

We would be honored to have your support of this project. Thank you for your time and dedication to protect Minnesota's environment and natural resources, and for working through this challenging crisis to continue advancing solutions for all Minnesotans today and in the future.

Regards,

Sarah
