

Nettle Valley Farm

Dayna Burtness
Spring Grove, MN

Huge thanks to

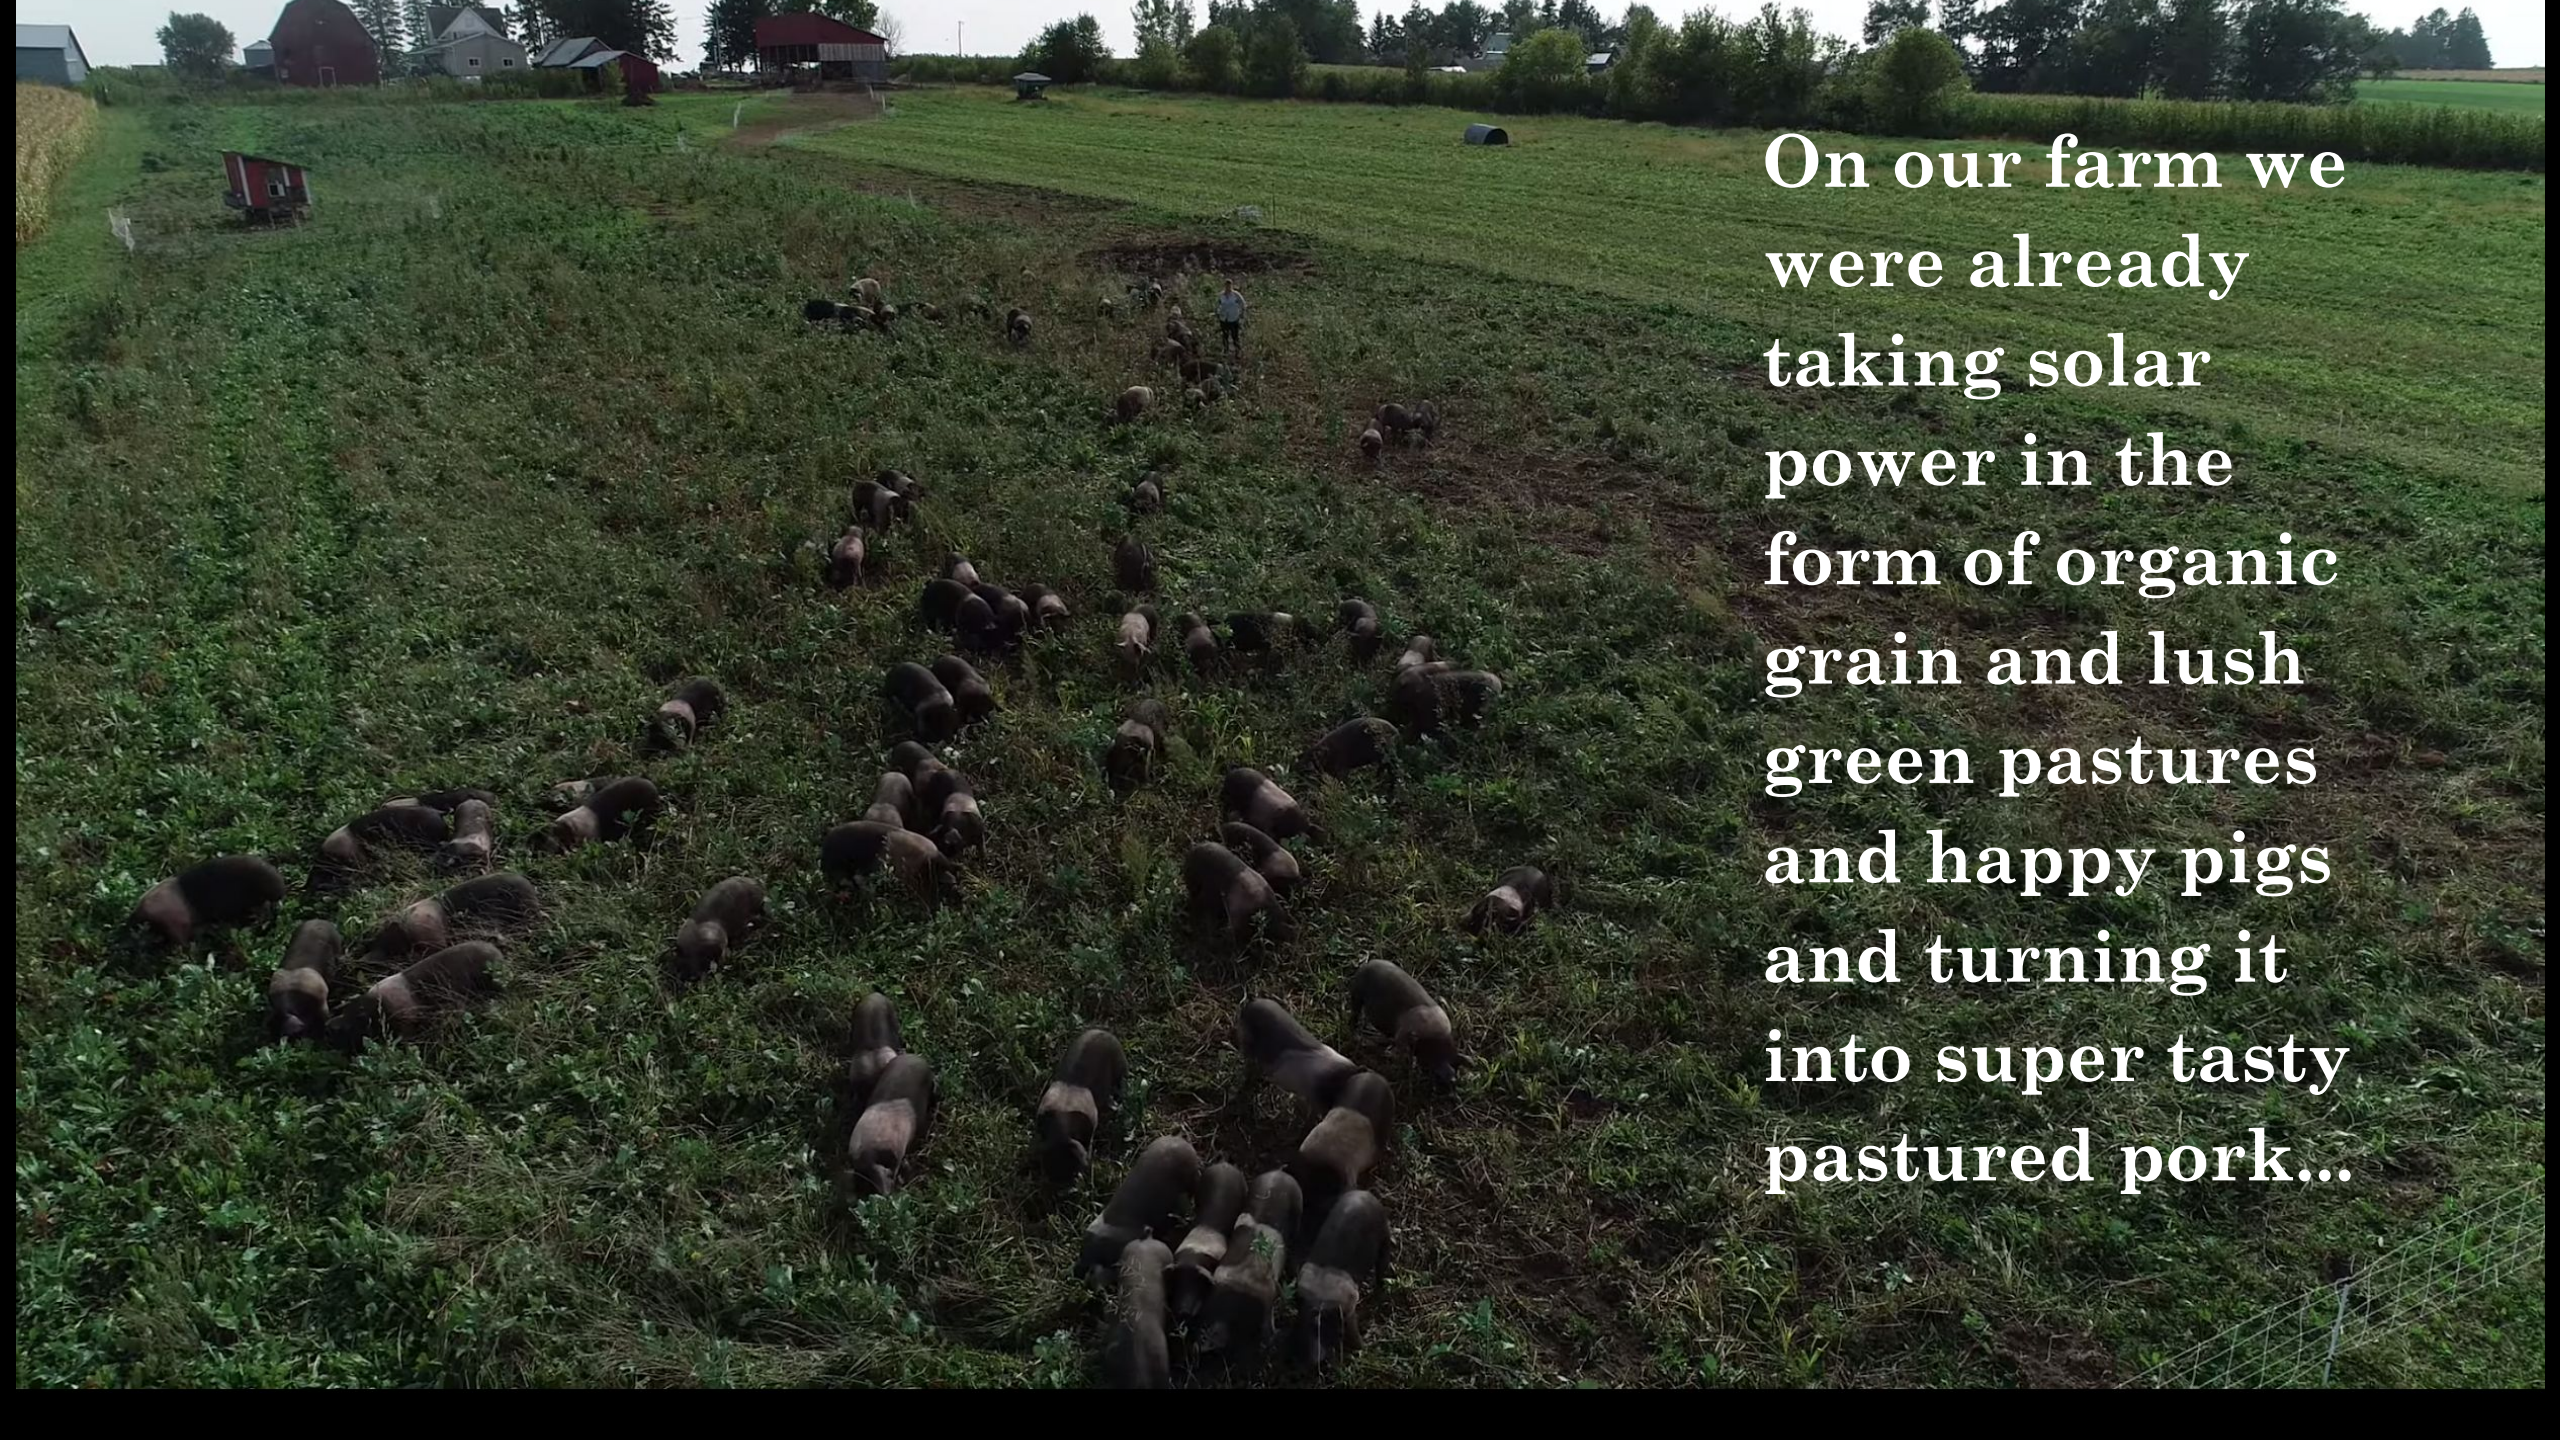

for helping us get started on going solar!

Distributed,
decentralized solar
on regenerative
farms just makes
sense!

And helps us make
cents (har har)

A large group of dark-colored pigs are grazing in a lush green field. The pigs are scattered across the field, some standing and some lying down. In the background, there are several farm buildings, including a large red barn and a smaller white house. A person is visible standing in the field near the center. The sky is overcast.

On our farm we
were already
taking solar
power in the
form of organic
grain and lush
green pastures
and happy pigs
and turning it
into super tasty
pastured pork...

...so adding panels that turn that same solar power into electricity that powers our fences and freezers and hopefully someday, an electric delivery vehicle, made perfect sense for us!

Please keep in touch!
