

# ST. JOSEPH SEWER MAIN PROJECT

A \$5.7 million request for State Funding to build a sewer main to serve as a catalyst to expand industrial/business development & workforce housing.

- This project has been a community priority for many years. In 2006, the City invested by extending the water main and building a water treatment plant to serve the area.
- This investment would more than double the City's development area from 2,000 acres to about 4,100 acres.
- Need to increase & diversify tax base. Approximately 28% of property in St. Joseph is tax exempt due to being home to the College of St. Benedict.
- Access to major corridors, including Highway 75 & Interstate 94 connecting it to the region & beyond attracts industry.

The City of St. Joseph Sewer Main Improvements will help to increase economic development, increase tax base and meet the demands of workforce needs as part of the St. Cloud Region.
