## **A Strong Commitment to Mental Healthcare**

Fairview is the largest mental health provider in the Upper Midwest

Fairview provides **42% of the total inpatient mental health beds** available through the metro's six largest health systems— a disproportionate share. In addition to inpatient, Fairview takes a market-leading, innovative crisis stabilization approach to intervene before inpatient care is required.

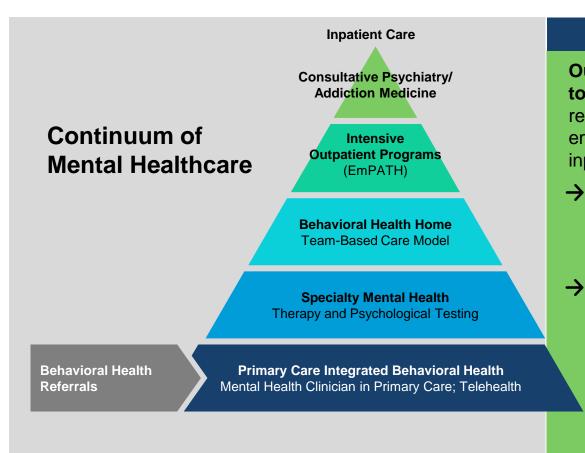

→ Fairview currently has 250+ inpatient mental health beds located outside of St. Joe's, meeting system clinical demand for MHFV patients.

→ Existing inpatient mental health beds at St. Joseph's would
→ remain onsite through 2021. Fairview is committed to exploring partnership models for these inpatient mental health beds (based on community needs), including the potential of a new state of the art behavioral health facility.

## **Integrative Care Focused on Wellness**

Committed to a continuum of care in mental health, taking a holistic approach

Our future state is focused on building on our *proactive* approach to mental health with an increased combination of services representing the full continuum of mental healthcare: telehealth, emPATH, integrated primary care, ambulatory outpatient, and inpatient.

- → Fairview will expand emPATH units (Emergency Psychiatric Assessment, Treatment, and Healing Unit) in our health system, providing care for patients experiencing emergent mental health needs.
  - Fairview has a proven record of innovation and partnership in mental health to expand service options and address health equity; our partnerships with Catholic Charities and the Opportunity Center provide expanded access to tele-mental health.

Unique partnership with primary care to provide just-in-time care in a setting that is better for the patient and provides more value.
