**Date** January 30, 2023

## Summary

House File 673 requires the Minnesota Pollution Control Agency to:

- collect emissions data annually from facilities that emit toxic chemicals into the ambient air; and
- promulgate rules establishing compliance assessment measures -- monitoring and recordkeeping requirements and facility inspections and emissions testing frequencies – that reflect the environmental and human health risks posed by the toxicity and volume of a facility’s emissions.

Rulemaking is to begin no later than January 15, 2024.
