Overview

This bill establishes an Office of Enterprise Sustainability as a statutory entity within the Department of Administration. The office is required to engage in a number of activities to track and reduce the impacts of state government on the environment.

The Department of Administration currently receives appropriations as part of its base budget to support the work of an office like the one required by this bill. By enacting the office into state law, the existence of the office is protected against future base budget reductions or other decisions of the commissioner of administration to end this work.
