Date February 26, 2020

Summary

H.F. 3438 requires a utility to post information regarding its electricity rates on the utility's website, including the amount of monthly demand charges that does not vary with the amount of electricity consumed; per-kilowatt charges, including any time-of-day or seasonal rates; or rates that change based on the amount of electricity consumed. Copies of the posting must be sent to the Public Utilities Commission, which must also post the information on its own website.
