Overview

This bill requires the Minnesota Department of Transportation (MnDOT) to implement performance measurement and annual targets for the trunk highway system, and to provide legislative reports by December 15 of each year.

There must be an inventory, performance measures, and annual targets for at least each of the following asset categories for each transportation district:

- bridge;
- pavement;
- geotechnical;
- pedestrian;
- bicycle; and
- transit.

The plan must also include gap identification between targets and the current status of the assets, life cycle and corridor risk assessments, and an annual investment plan for each district based on expected funding over the next ten years.

Effective July 1, 2019, with the first report due December 15, 2019.
