

Subject Aquifer Recharge

Authors Lippert

Analyst Janelle Taylor

Date March 13, 2020

Summary

This bill would modify the state's groundwater policy to add, where groundwater levels are being depleted and not naturally recovering, that artificial recharge options be considered and implemented when feasible and appropriate.

The bill also requires the Environmental Quality Board (EQB) to submit a report to the legislature on the feasibility of using artificial recharge to replenish groundwater and specifies what must be included in the report.
