Summary

Adds penetration of roof coverings to install a solar photovoltaic system to the areas of work that count as the special skill of residential roofing. Adds assembly of a support system for a solar photovoltaic system to the areas of work that count as the special skill of general installation specialties.

A person who performs two or more special skills is required to be licensed as a residential building contractor. This involves registration with the Department of Labor and Industry, payment of a fee, and complying with laws relating to continuing education, bonding, insurance, contracts, and contribution to the contractor recovery fund, among other provisions.
