Date March 31, 2025

Summary

This bill clarifies that well contractors performing work licensed under Department of Health statutes are not also required to be licensed or have plans reviewed or work inspected by the Department of Labor and Industry. This generally effects the installation of pipes and equipment leading from a well up to, but not into, a house. Work moving into a house or other building would still require licensure as a plumber, as well as plan review and inspection.
