Historical Growth in City Levies and Aids 1996 - 2002

The attached run shows the annual growth rate in each city's levy plus general government aids for the period 1996-2002 (proposed). Property tax levies and general state aids are linked through the levy limit law since this is a limit on the combined growth in both. This combined number is also a better indicator of local government decision making than just the growth in the levy.

The levies included in these calculations are the city's net tax capacity levy plus its market value levy, minus any transit opt-out levy. Since 1997, some suburbs have levied for transit instead of allowing it to be provided by the metropolitan council. The operating portion of this levy is assumed by the state beginning in Pay 2002.

The general state aids included in these calculations are local government aid (LGA); homestead and agricultural credit aid (HACA), except mobile home HACA; taconite aid, including the taconite transferred from schools; and the new transit replacement aid (beginning in Pay 2002).

Caveats: The run does not make a judgement on a reasonable increase for levies plus aids imposed by any city. Many factors can effect a city's increase in any one year such as city growth, deferred spending in the past, emergencies, choices in how to fund capital projects, etc.... The run does provide information in changes in historical growth rates in spending that may be worth additional investigation.
